

ABSTRACT OF THE DISCLOSURE

An apparatus including a user interface configured for a user to perform an operation of the apparatus, a sensor arranged at the user interface and configured to detect whether a user exists within a predetermined distance from the sensor, and a processor configured to determine, based on an output of the sensor, whether a change from an existence of a user to an absence of the user has occurred, and to limit an item operable from the user interface if it is determined that the change has occurred.
